Their cars may be ugly, misconceived, badly built, diabolical to drive, ridiculously thirsty, or just plain unreliable. So which were the worst of the past 20 years? Powered by a silky smooth 4-litre V8 engine, the XK8 and XKR have set new standards in performance, refinement and comfort. This colorful guide examines XK heritage through to the famous E-type and then traces Jaguar's return, after a foray into the GT market with the XJS, to the design and development of the cars which have been the company's flagships for the past four years. A special chapter is devoted to two exciting two-seater prototypes: the XK180 and the F-type Concept. Features production and sales history, technical specs, performance assessments, optional equipment, model ID features, design, and development. The XJ40, mainstay of Jaguar production from 1986 to 1994, was the last saloon in which Sir William Lyons had any styling involvement. It broke new ground with its technological sophistication and, despite electronic and body problems, was the saloon which reintroduced the marque to a younger buying public. Today the XJ40 -- more reliable than previous models and economic to buy and run -- is an important 'entry level' model for first-time Jaguar buyers and has a large following. It is an ideal candidate for the You & Your series which provides an 'ownership companion' approach for relatively

recent cars of strong enthusiast interest. This book tells the story of how John Egan gradually overcame the odds and, piece by piece, rebuilt this great company, winning over the workforce, the overseas dealers and, most important of all, the customers. Working with Margaret Thatcher and her Government, Egan and his team of managers overcame every obstacle, every set-back, every challenge. Again and again, it looked impossible. Yet using innovative techniques, intelligence, eloquence, openness, motor racing and much more, they saved this most charismatic company which has created some of the finest and most loved motor cars of all time. It is an amazing story that will appeal equally to car enthusiasts, those in business and readers interested in social history. On the way, it considers aesthetics, design, creativity and the creative industries, and a number of other similar topics. Much of the existing economic literature on innovation has taken a particularly technological or functional viewpoint as to what sort of new products and processes are to be considered innovations. One of the key things this book shows is that there is a type of innovation, here labelled 'soft innovation', primarily concerned with changes in products (and perhaps processes) of an aesthetic or intellectual nature, that has largely been ignored in the study of innovation prevalent in economics. Examples of innovations that, as a result of this refocusing, are here placed at the centre of the analysis include: the writing and publishing of a new book, the

writing, production, and launching of a new movie, the development and launch of a new advertising promotion, the design and production of a new range of furniture, and architectural activity in the generation of new built form designs. The realisation of the existence of soft innovation means that, not only is innovation more widespread than previously considered, but that it may also take a different form than commonly considered. Soft Innovation addresses key issues such as: * The measurement of the rate and extent of soft innovation, * The determinants of the rate and direction of soft innovation and its diffusion, * The impacts of soft innovation and diffusion upon outputs, productivity, employment, firm performance, trade, and economic welfare, * Policy, considering whether there is a rationale for government intervention in the soft innovation generation and diffusion processes, and if so what instruments can be used in such intervention? Soft Innovation breaks new ground in the study of innovation, and will be key reading for academics and researchers of Innovation, Marketing, and Design, as well as consultants, practitioners, and policy-makers concerned with the creative industries.
