***The end of the cold war was thought to signal the triumph of Western capitalism over Communism. In Maonomics: Why Chinese Communists Make Better Capitalists than We Do, Napoleoni argues just the opposite: what we are witnessing instead is the beginning of the collapse of capitalism and the victory of "communism with a profit motive." Maonomics charts the prodigious ascent of the Chinese economic miracle and the parallel course of the West's ongoing insistence on misconstruing China and its economy even as we acknowledge its growing influence and importance. Maonomics is a warning call whereby Western governments can avoid economic collapse by learning how to understand more clearly what the lessons of the Chinese economy really are. Based on first-hand reporting from China during frequent visits in the last several years, Maonomics lends credence to the***

***Chinese view and translates it for Western readers. For example, the Chinese too are attached to their vision of democracy, but it is different from ours. It isn't focused as much on voting as it is economic opportunity and the fair distribution of wealth and prosperity. Napoleoni also separates failed Leninist political ideology from true Marxist theory, showing that Marx's writings do not reject profit so long as it is used to benefit the people. Marx's dictatorship of the proletariat is being realized in China, she argues, where giant steps forward are being made in the name of progress and the wellbeing and prosperity of the Chinese people. Looking at the Chinese economy up close, any economist would be hard pressed to say that they are not on the right track. Here Loretta Napoleoni offers a front row seat on the greatest show on earth: the peaceful economic revolution that is shifting the balance of power in the world from West to East. ***1994-1998 The Ford 8.8- and 9-inch rear differentials are two of the most popular and best-performing differentials on the market. While the 8.8-inch differential is commonly used in late-model Mustangs, the 9-inch is the more popular and arguably the most dominant high-performance differential for muscle cars, hot rods, custom vehicles, and race cars. Built from 1957 to 1986, the 9-inch Ford differential is used in a huge range of high-performance Ford and non-Ford vehicles because of its rugged construction, easy-to-set-up design, and large aftermarket support. The 9-inch differential effectively transmits power to the ground for many classic Fords and hot rods of all types, but it is the choice of many GM muscle car owners and racers as well. These differentials have been used extensively and proven their mettle in racing and high-performance applications. The Ford 8.8- and 9-inch must be rebuilt after extensive use and need a variety of different ratios for top performance and special***

Aftermarket 9-inch performance differentials from manufacturers including Currie, Moser and Strange are reviewed and you learn how to rebuild and set up these high-performance aftermarket differentials. In addition, this book provides a comprehensive identification chart to ensure readers properly identify the model and specifics of the 9-inch differential.
