Politics and the Environment in Eastern Europe Dec 07 2020

Europe remains divided between east and west, with differences caused and worsened by uneven economic and political development. Amid these divisions, the environment has become a key battleground. The condition and sustainability of environmental resources are interlinked with systems of governance and power, from local to EU levels. Key challenges in the eastern European region today include increasingly authoritarian forms of government that threaten

the operations and very existence of civil society groups; the importation of locally-contested conservation and environmental programmes that were designed elsewhere; and a resurgence in cultural nationalism that prescribes and normalises exclusionary nation-building myths. This volume draws together essays by early-career academic researchers from across eastern Europe. Engaging with the critical tools of political ecology, its contributors provide a hitherto overlooked perspective on the current fate and reception of 'environmentalism' in the region. It asks how emergent forms of environmentalism have been received, how these movements and perspectives have redefined landscapes, and what the subtler effects of new regulatory regimes on communities and environment-dependent livelihoods have been. Arranged in three sections, with case studies from Czechia, Hungary, Lithuania, Poland, Romania and Serbia, this collection develops anthropological views on the processes and consequences of the politicisation of the environment. It is valuable reading for human geographers, social and cultural historians, political ecologists, social movement and government scholars, political scientists, and specialists on Europe and European Union politics.

**Peak Performance** Mar 10 2021 The key to success and reaching peak performance is integrating three processes to optimize business through the use of human performance improvement tools, lean thinking, operational excellence, along with a strong organizational culture as the underpinning. These components form the basis of the Peak Performance Model. The tools presented in this book, along with the case studies, demonstrate how the model is applied and integrated into company practices. Companies and

organizations want to improve their performance, but many have not integrated the right tools and processes. Through the application of the Peak Performance Model, every company can achieve and sustain Peak Performance.

*Orbital Debris* Nov 17 2021 Since the beginning of space flight, the collision hazard in Earth orbit has increased as the number of artificial objects orbiting the Earth has grown. Spacecraft performing communications, navigation, scientific, and other missions now share Earth orbit with spent rocket bodies, nonfunctional spacecraft, fragments from spacecraft breakups, and other debris created as a byproduct of space operations. *Orbital Debris* examines the methods we can use to characterize orbital debris, estimates the magnitude of the debris population, and assesses the hazard that this population poses to spacecraft. Potential methods to protect spacecraft are explored. The report also takes a close look at the projected future growth in the debris population and evaluates approaches to reducing that growth. *Orbital Debris* offers clear recommendations for targeted research on the debris population, for methods to improve the protection of spacecraft, on methods to reduce the creation of debris in the future, and much more.

*International Business Operations and the Impact of Political Environment* Feb 18 2022 This study attempts to develop a conceptual frame work to deal with operations and management in a foreign business environment. The study develops a measure for business financial performance by employing factor analysis methods to integrate three profit-related ratios, derived from Modified DuPont Model, utilizing financial performance data from 630 multinational companies ranked in Business Week's Global 1000 report between years 1994-1997. In the analysis of multinational companies cases, approximately 400 sets of financial data (Return/Assets, Return/Revenues, Return/Equity), were categorized and computed for intercorrelations and development of the financial performance index. A new financial performance measure was derived and termed the Financial Performance Index or FPI. Indices trends for 4 years were generated and compared among four parent countries (France, Germany, Japan, and U.S.), across four selected industry groups, i.e., automobile, pharmaceuticals, electric and electronic equipments and banking. In the analysis of the multinational companies data, the financial

performance index exhibited patterns and trends which varied by country and across industry groups; moreover, they added analytical depth when interpreted along with market shares and sales mode. To test the hypothesis that a multinational company's financial performance in foreign business environment is linearly related to the host country's political conditions. Twelve political uncertainties indicators (independent variable) in thirteen host countries were chosen to test for linear relationship with the level of financial performance index (dependent variables). Five equations were formulated to predict the Financial Performance Indices of the four selected industries and the country composite. A step-wise method of multiple regression analysis was employed to measure and determine a predication equation with most favorable financial performance in thirteen host countries of four major industries, i.e., automobile, pharmaceuticals, electric and electronic equipments, and banking. The combination of political risk indicators in the host country can explain the variations of the country composite FPI and the FPI across four selected industries. Results of multiple regression analysis support the hypothesis, enabling prediction of the FPI as well as analysis of the differential importance of the political risk indicators. A model of international business operations was fully developed to be applied as a conceptual framework for further research and practical applications in the field of international business operations.

The authors suggest new ways to categorize the complex terrain, infrastructure, and populations of urban environments and incorporate this information into Army planning and decisionmaking processes.

## **Satellite Observations of the Earth's Environment** Dec 19

2021 This report addresses the transition of research satellites, instruments, and calculations into operational service for accurately observing and predicting the Earth's environment. These transitions, which take place in large part between NASA and NOAA, are important for maintaining the health, safety, and prosperity of the nation, and for achieving the vision of an Earth Information System in which quantitative information about the complete Earth system is readily available to myriad users. Many transitions have been ad hoc, sometimes taking several years or even decades to occur, and others have encountered roadblocksâ€"lack of long-range planning, resources, institutional or cultural differences, for instanceâ€"and never reached fruition. *Satellite Observations of Earth's Environment* recommends new structures and methods that will allow seamless transitions from research to practice.

### **Operations Research and Environmental Management**

Mar 22 2022 The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics, ranging from economics to engineering, from environmental management at the industry or regional level to basic mathematical modeling research. It is the combination of the activities on these last two topics that led the Fondazione to organise, with the University of Geneva, a workshop where operation research tools were designed with the aim to provide national and local policy makers with appropriate analytical and policy instruments for environmental management. In the recent past, attention has often been devoted to global environmental issues in which the level of policy making is either international, through multi-country agreements on emission control, or national, when environmental policies are designed to control domestic pollution. Many environmental problems, however, have a local or regional dimension. Even when their dimension is global, e. g. in the case of the greenhouse gas effect, relevant decisions on emission control, such as the adoption of energy saving utilities, are taken at the local level. In many countries, the current legislation imposes the local authorities to prepare

plans and adopt measures to control energy consumption or to reduce waste of natural resources. It is therefore important to analyze the way in which local or regional authorities optimise their environmental management.

During this grant period, the CMNR has met from three to six times each year in response to issues that are brought to the committee through the Military Nutrition and Biochemistry Division of the U.S. Army Research Institute of Environmental Medicine at Natick,

Massachusetts, and the Military Operational Medicine Program of USAMRMC at Fort Detrick, Maryland. The CMNR has submitted five workshop reports (plus two preliminary reports), including one that is a joint project with the Subcommittee on Body Composition, Nutrition, and Health of Military Women; three letter reports, and one brief report, all with recommendations, to the Commander, U.S. Army Medical Research and Materiel Command, since September 1995 and has a brief report currently in preparation. These reports are summarized in the following activity report with synopses of additional topics for which reports were deferred pending completion of military research in progress. This activity report includes as appendixes the conclusions and recommendations from the nine reports and has been prepared in a fashion to allow rapid access to committee recommendations on the topics covered over the time period.
